

EVA AI — Privacy Policy

Last updated: 21 August 2026

App: EVA AI (com.evai.app)

This policy explains what data the EVA AI mobile app collects, why it is collected, and what rights you have over it.

In short: **we do not ask for your name, email, or phone number.** No account is required. Everything we collect exists to find you a nearby, affordable charging station.

1. Data we collect

1.1 Location

What: Your device's approximate or precise location (latitude and longitude).

Why: "Which stations are near me" is a question that cannot be answered without a location. Without it we cannot tell you which station is close or cheap.

How it is used: Your location is sent to our server to look up nearby stations and to start directions. It is **not stored** after the request; we keep no location history on the server.

Permission: You can decline in the app. The app keeps working, but the station list cannot be shown — because there is no "nearby" to compute.

1.2 Device identifier

What: A random identifier (UUID) generated by the app on first launch, and a signing key belonging to it.

Why: To verify that requests genuinely come from the app, and to tie your subscription to your device.

Important: This is **not an advertising ID**, not a hardware identifier (IMEI, MAC, Android ID), and it does not identify you. It is lost when you uninstall the app.

1.3 Vehicle details

What: Make, model, battery capacity, connector type and charge level.

Where stored: **On your device only**, encrypted. Make and model are

never sent to our server.

What does reach the server: Connector type and charge level, used to filter stations. Real-world identifiers such as licence plate or VIN are **never collected**.

1.4 Vehicle telemetry (optional)

What: If you connect an OBD-II Bluetooth adapter: battery percentage, estimated range, speed, odometer and charging state.

Why: So you do not have to type your charge level, and so we can warn you when it drops.

How: Pairing happens in your phone's own Bluetooth settings. The app only reads from an already-paired adapter; it does not scan for nearby devices and does not use Bluetooth to infer your location.

Entirely optional. If you do not connect an adapter, this data is never produced.

1.5 Notifications

We send a notification when your battery drops below 50% and below 30%.

You can decline the permission or turn it off later.

2. Data we do not collect

The following are **never** collected:

- Name, surname, email address, phone number
- Advertising identifiers or tracking IDs
- Contacts, photos, files
- **Audio recordings** (the app has no voice assistant)
- Camera images
- Licence plate or VIN
- Location history

3. Who we share data with

We **do not sell** your data and do not share it for advertising. The following services are used to make the app work:

Service	Purpose	What it sees
Google Play services (Maps, Location)	Map display and location	Location

Service	Purpose	What it sees
Google Play Billing / RevenueCat	Subscription management	Anonymous device ID, purchase state
Google Play Integrity	Tampering detection	Device integrity verdict
Open Charge Map	Station inventory	Only the queried area — no personal data

When you start directions, your phone's maps app opens and receives the destination; from that point its own privacy policy applies.

4. How long we keep data

Data	Retention
Location query	Not stored (processed only during the request)
Device ID and subscription record	While the subscription is active + 12 months (legal/accounting)
Vehicle telemetry (latest reading)	10 minutes, then deleted
Vehicle profile	On your device, until you delete it
Usage counters (free quota)	30 days

5. Your rights

Depending on where you live (GDPR in the EU/EEA and the UK, CCPA in California), you have the right to:

- **Access** the data we hold about you
- **Deletion** of your data
- **Rectification** of inaccurate data
- **Object to and restrict** processing
- **Portability** — receive your data in a machine-readable format
- **Complain** to your national data protection authority

How to delete your data

In the app: Settings → Delete my data.

By email: Write to

gokturkalazdaghan@gmail.com with the

subject "Data deletion request". Requests are handled **within 30 days**.

Uninstalling the app deletes the data on your device; to remove the subscription record on the server, use one of the routes above.

6. Legal basis (GDPR)

Processing	Basis
Station lookup using location	Consent (permission prompt)
Subscription tied to device ID	Performance of a contract
Fraud and tampering detection	Legitimate interest
Vehicle telemetry	Consent (connecting an adapter)

7. Children

EVA AI is not directed at children under 13 and does not knowingly collect data from them.

8. Security

- All communication with the server is encrypted over **HTTPS**.
- Requests are **signed** with a device key; unsigned requests are rejected.
- The vehicle profile is stored **encrypted** on the device.
- Your payment details **never reach us** — Google Play handles them.

9. Changes

If this policy changes, we publish the current version at this address and notify you in the app. The "Last updated" date appears at the top.

10. Contact

Data controller: Göktürk Alazdağhan

Email: gokturkalazdaghan@gmail.com

If you are in the EU/EEA and your concern is not resolved, you retain the right to lodge a complaint with your national data protection authority.
